Contest Manager's Comments

Few participants and low scores this year. I hope that next year it will be better.

Two SWLs had problems with their Contest software and the related log. I am sorry but I had to put one of them as checklog. I contacted both the SWLs but unfortunately the logs sent me have been the only copy of their log. For the future I could suggest the procedure I use for the CW/SSB Contests: manual log on a block notes as a first step and software log as a second step. But I am an old timer...

Other two SWLs sent me a paper log and because of the big difference in the score I didn't convert their log in Cabrillo without the check via the software made by Marek SP7DQR (n.a. in the tables). The other logs have been cross-checked with the ham logs.

Congratulations to Richard DL/OK2-31097 for the highest score and to all winners and thanks to all who took part. I hope you come back next year.
